Project Design Phase-II Solution Requirements (Functional & Non-functional)

| Date | 08 October 2022 |
|---------------|--------------------------|
| Team ID | PNT2022TMID24849 |
| Project Name | Plasma Donor Application |
| Maximum Marks | 4 Marks |

Functional Requirements:

Following are the functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description |
|--------|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1 | Usability | Plasma donor Application is very useful to the emergency situation patient, because that application gives the information of the nearby plasma donors and request to donate their plasma to patient via email, SMS etc. |
| NFR-2 | Security | Very secured website and application that provides various security features like 2 step verification, Email Verification, OTP password etc |
| NFR-3 | Reliability | It gave the reliable information to the user, because the register donors are well reliable person. So reliability is high. |
| NFR-4 | Performance | Carrying out an evaluation to quantify empirically the recommendation abilities of two state-of-the-art methods, considering different configurations, within the proposed framework. |

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|-------------------------------|--------------------------------------------------------------------------------------|
| FR-1 | User Registration | Registration through Form |
| | | Registration through Gmail |
| | | Registration through Website |
| | | Registration through Application |
| FR-2 | User Confirmation | Confirmation via Email |
| | | Confirmation via OTP |
| FR-3 | Customer care | Regularize the Send grid service |
| FR-4 | Administrator | Monitor the overall functionalities of the application and ensure quality of service |
| | | |
| | | |

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

| NFR-5 | Availability | Made publicly available a new dataset formed by a set of plasma donors profiles and a set of patient collected from different search engine sites |
|-------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-6 | Scalability | Scalability problem mainly arise in huge and dynamic data sets which is produced by interactions between user and item such as preferences, ratings and reviews. It is possible that when some recommendation algorithms are applied on relatively small data sets, they provide the best results, but may reflect inefficient or worst behaviour on very large datasets. |
